...and here it ends.

...when Einstein introduced his formula

$$e = m \cdot c^{2xx} , \quad (1)$$

which is at the same time the most widely known and the least well understood physical formula.

...from which follows Kirchoffs current law:

$$\sum_{k=1}^n I_k = 0 . \quad (2)$$

Kirchhoffs voltage law can be derived ...
...which has several advantages.

$$I_D = I_F - I_R \quad (3)$$

is the core of a very different transistor model. ...
